Exam

The exam, taking place June 22, consists of 2 parts:

- ▶ A presentation (in groups) of one of the four projects
 - ▶ Project drawn at random on the spot
 - ▶ Short presentation of the poster – viewed on a projector – followed by a short set of questions
- ▶ A physical multiple choice exam (individual)
 - ▶ Two earlier exams can be found on Learn under Content
 - ▶ This year's exam is 2 hours and will be in between the other two in length

How to make a good poster?

- ▶ Your project asks a set of fairly concrete questions – we expect you to be able to answer these with the help of your poster
- ▶ When making the poster, think in terms of:
 - ▶ Figures, tables etc that support you in explaining the technical content of your project
 - ▶ Structure that is easy to follow
 - ▶ Making an appealing poster
 - ▶ Showing us your reasoning
 - ▶ Explaining your use of AI tools – see this also as tips for your fellow students
- ▶ Consider making your poster a “template” easy to adjust for the next 3 projects.

Did you use AI tools?

- ▶ How are you using them?
- ▶ Do you find them useful?
- ▶ How do you think they would be used well in future teaching situations?

A Real Case: ChatGPT in the workplace

- ▶ Consider a team of developers in an IT consulting company working on critical public infrastructure
- ▶ They have developed a culture of using ChatGPT to help them debug their code by sending code snippets to ChatGPT and asking it to fix the code
- ▶ Is this OK? Problematic? Why?
